DATA CALCULATION NOTES:

A. Individual questions from the client satisfaction surveys are collapsed into five domains, each domain consists of between 2 and 9 questions. A valid domain must contain at least 66% of the questions in that domain with an answer ranging from 1 to 5. All other responses are considered "missing". Once the domain score is calculated the 'positive' scores in this report are determined. For the Appendix A, a positive score must be an average that is below 2.5 (Appendix A scores range from 1 being most positive to 5 being most negative). For the Appendix B and C, a positive score must be an average that is above 3.5 (Appendix B and C scores range from 5 being the most positive to 1 being the most negative). The percentages in this report = (Total 'Positive' Domains) / (Total Domains).

B. The BOARD scores are calculated based on all Agencies in the same board area EXCEPT the agency listed in the title bar of the report.

C. The PPS scores are calculated based on all boards in the PPS region EXCEPT the board listed in the title bar of the report.

D. The KEY INDICATOR section of the report counts the number of MOST POSITIVE (1 for Appendix A, 5 for Appendix B and C) responses for the question "I would recommend this agency to a friend or family member" and divides that by the total valid responses (Responses between 1 and 5) received for the same question.
